TECHNICAL BULLETIN

Bulletin Number: T08-01

Date: January 21, 2008

Distribution: Internal & External

Application Equipment Update

As part of our continued effort to maintain our high level of products, and product performance, we are requiring the use of The One Step Battery Powered Single Bead Applicator (Model #900 IE2) or One Step Pneumatic Single Bead Applicator (Model #AG400) for the application of Weather-Tite Hurricane Force Universal Sealer. Inconsistencies with various manual applicators in the general marketplace cannot ensure proper mixing while dispensing the material from one application to the next.

One Step Pneumatic Single Bead Applicator
Model # AG400

One Step Battery Powered Single Bead Applicator
Model # 900 IE2

All of the single bead applicators, including the orange Ultra Drive Manual Applicator (Model #898-1), black Heavy Duty Manual Applicator (Model #B26T1500), and the Stand Up Center Drive Manual Applicator (Model #B26T1500L) will dispense and provide a consistent application of all other Weather-Tite products. Ultimately, the contractor is responsible for selecting the proper tool.

For further information and details, please contact WTT Technical Department (866.868.0883).
